

Ani Khachatryan

I am seeking a full-time position in software engineering. I have experience in building web applications from internships, bootcamps, hackathons, and personal projects. I am a dedicated and hardworking person who is both an independent learner and a team player, and can quickly adapt to different environments and situations.

EXPERIENCE

Flowductive, Los Angeles, CA — Software Engineer

JULY 2022 - PRESENT

I am working as a Software Development Engineer for Flowductive, which is an application that allows the user to commit their time to being productive in a fun and unique way. I am working on the development of the web application of Flowductive, such as the login page, create account page, creating and adding the functionality for certain buttons, etc. The technologies being used are React.js, TypeScript, and Firebase.

META+LAB, Northridge, CA — Boot Camp

SEPT 2018 - JUN 2019

I attended both the Pathfinder and Summer Immersive Boot Camps where I learned how to use PHP, Laravel, Git, Docker, and MySQL. I challenged myself to learn Vue.js during this boot camp and created a full stack forum web application, where the user is able to create posts, delete their own posts, log in with their existing account, create a new account, etc.

EDUCATION

California State University, Northridge — Bachelor of Science in Computer Science

AUGUST 2017 - DECEMBER 2021

- Graduated with Honors
- Dean's List for multiple semesters

EXTRACURRICULAR ACTIVITIES

Accessibility Competition, Northridge, CA

JAN 2021

I volunteered to build an accessibility Discord bot that can be added to a voice channel for people who are deaf or hard of hearing. My team consisted of three (3) other people. The bot would listen to what the person in the voice channel says and send it as a message in the chat in American Sign Language (ASL). The language we used for this was Go.

Location: Los Angeles, CA

PROJECTS

SAN Distance Learning

- My team members and I created a Learning Management System similar to Canvas, but for children K-5.
- I worked on the backend and database portion of this project where I created the functionality of logging in, creating an account, submitting assignments, making sure the data was being sent to the database correctly, etc.
- I also assisted my team members in the frontend with resolving bugs and creating/improving features.
- Technologies: Laravel, PHP, Vue.js, JavaScript, MySQL, AWS, GitHub

Full Stack Forum

- I created a Full Stack SPA blog website that uses Object-Relational Mapping, Authentication, Dependency Injection, and follows the Model-View-Controller design pattern.
- Technologies: Laravel, PHP, Vue.js, JavaScript, MySQL, AWS, Heroku, Bootstrap, GitHub

You-Til

- My team members and I created an Android mobile application with multiple utility apps, where the user can make unwanted utilities invisible in the settings.
- I worked on creating some of these utilities, along with creating the settings portion of the application.
- Technologies: Java, Android Studio, GitHub

SKILLS

Languages: JavaScript, TypeScript, Java, C, Go, PHP

Frontend: React.js, Vue.js, jQuery, Bootstrap, HTML, CSS

Backend: Node.js, SQL, Docker, Laravel

Database: MySQL, PostgreSQL

Cloud Tech: AWS, Firebase, Heroku

Processes: Agile methodology, Scrum

Testing: Unit Testing, JUnit, PHPUnit

Other: RESTful APIs, Git, GitHub, Linux
